These Insects Are Killed With VAPO-SWAT AND VAPO-TAB

**Help protect your premises against
Polio, Sleeping Sickness, Many Other Diseases**

A CONTROL FOR MOST ALL INSECTS

VAPO-SWAT is an electronically balanced instrument specifically designed to vaporize VAPO-TAB. This modern chemical was used in England during their heroic stand against the Nazi horde. In their bomb shelters, they controlled body-lice, flies, etc., for their health. With this smartly designed quality constructed unit, the stain, fog and residue caused by most insect sprays are over. VAPO-SWAT operates silently, automatically and continuously — penetrating every nook and crevice which would normally be inaccessible to spray or powder — providing labor-free protection "around the clock" from insect ravages and expense. You simply hang VAPO-SWAT according to instructions, drop a VAPO-TAB into the cup and plug into any convenient electrical outlet and note the reaction. Your unit is guaranteed for 3 years.

JUNIOR DESTROYS INSECTS

Flies, Mosquitoes, Gnats, Ants, Moths, Moth Larva, Spiders and Most Other Insects

For instance, to kill Moths and Moth Larva, let it operate in a closed closet during cycle of moth, from egg stage through larva stage.

For insect control in larger rooms or to protect the whole premises, let operate on a working day basis. Plug it in in the morning, unplug at night before retiring. Use on a working day basis of 8 hours. Do not use in sleeping quarters.

Many insects resistant to DDT for example, are destroyed by VAPO-SWAT and VAPO-TAB.

SPECIAL INSTRUCTIONS — PLEASE READ CAREFULLY

1. Just plug your Junior VAPO-SWAT into any 110 or 115 volt outlet and it is ready to go to work. If there are any small children around, the unit should be mounted out of their reach, because the unit is hot.

2. Be sure to remove the tissue from the tablet. Remove the tissue with the tablet from the cup — take the paper completely off and replace bare tablet into cup. The paper is solely for protection in transit.

3. The receptacle for the tablet must be upright with open part parallel to the ceiling. After plugging in you may readily turn the colored barrel to accomplish this.

4. If unit fails to heat, remove colored barrel from plug by gently pulling apart, tighten heating element just as you would tighten a light bulb. Replace barrel on plug.

5. Be sure to put new tablet in your Junior unit whenever the old one is gone. Your dealer has a supply of these in handy 4 and 16 tablet packages. One tablet will last about three weeks and is designed to control an area of approximately 5000 cubic feet. This is the average size for smaller home, in larger homes you may need two units. This is especially true if you have a basement. There should be one Junior in the basement and one on the main floor of the building.

CAUTION

Use only according to directions. (Lindane) Gamma Isomer of Benzene Hexachloride may be harmful as a Vapor or Dust. Avoid prolonged breathing of vapor, dust or spray mist. Do not leave in eyes or on skin. Wash thoroughly. Avoid contamination of feed or foodstuffs.
